M. Sc. Computer Science

# First SemesterMOBJECS101Object oriented programming using C

# Unit-I

An overview of object oriented programming, Drawbacks of procedural programming, Concepts of OOP: Class, Object, Data abstraction, Encapsulation, Inheritance, Polymorphism, Dynamic Binding, Message Passing. An overview of C++ programming: basic programming construction, program statements, cout & cin, preprocessor directives. Variables, Constants and its types. escape sequence characters, input/output with cin and cout, cascading, expressions, the #define directive, Manipulators: the endl and setw manipulator, type conversions Data types, Primitive, Derived & User defined data types, Type modifiers (long, short, signed, unsigned).Operators: Arithmetic, Relational, Logical, Assignment, Ternary, Bitwise, Unary Operators.

**Decision Making Statements :** if, if-else statement, nested if-else, else if ladder, switch- case statement. Conditional statement.

# Unit-II

Loops: The while loop, do-while loop, the for loop, for loop variable

**Arrays:** Introductions, defining and initializing arrays, accessing array elements, Single and multidimensional arrays. Character array, string variables, reading multiple lines, arrays of string. **Structures:** Specifying the structure, accessing structure members, array of structures, nested structures, structures and classes, enumerated data types.

**Functions:** Function declaration and definition,, Calling the Function, comparison with library functions, passing arguments to functions: passing variables, passing by value, passing structure variables, Returning values from functions, returning structure variables, reference arguments

# Unit-III

**Objects and classes**: Classes and objects, specifying the class, C++ object as data types, Constructors and destructors, objects as functions arguments, overloaded constructors, return objects from functions, objects and memory, static class data, array of objects. Friend Functions. **Pointers:** address and pointers, the address of operator & pointer variables, accessing the variable pointed to pointers and arrays, pointers and functions, passing simple variables and arrays, string as function arguments, copying the string functions, library string functions, arrays of pointers to strings, memory management: new and delete operator, pointers to objects, referring to members, an array of pointers to objects..Overloaded functions, different numbers and kinds of arguments, Inline functions. Default arguments, Storage classes, auto, extern, static variables.

# Unit- IV

**Operator overloading**: Overloading unary operators, the operator keyword, operator return values, overloading binary operators, concatenating strings, multiple overloading, comparison operators, arithmetic assignment operators.

Inheritance: Derived Class and Base Class, specifying the derived class, accessing base class

members, the protected access specifier, derived class constructors, overriding member functions, class hierarchies, "abstract" base class, constructors and member functions, multilevel, multiple inheritance, member functions in multiple inheritance, ambiguity and multiple inheritance.Virtual base class, Function overriding, Virtual functions & dynamic binding.

# Unit- V

**Files and Streams**: Streams, the stream class hierarchy, stream classes, header files, string I/O, writing strings, reading strings, detecting end-of-file, character I/O, object I/O writing an object to disk, binary versus character files, reading an object from disk, the stream class, the open function, file pointers, specifying the position, specifying the offset the tellg function, closing files, redirection, IOS flags, redirecting input and output, command-line arguments, overloading the extraction and insertion operators.

#### **References:**

- 1. Object Oriented Programming In C + + Robert Lafore, Galgotia
- 2. The Annotated C + + Reference Manual, Manaret Ellis & Bjarne Strousstrup.
- 3. C + + Printer Plus, Stephen Parata, Galgotia

### **Other Reference Books:**

- 1. An Introduction To The OOP ( Only Chapter 6), K.V. Witt, Galgotia
- 2. Jamsa's 1001 C/C + + Tips, Kris Jamsa, Galgotia

3. A Treaties On Object Oriented Programming Using C + + - B. Chandra, Narosa Publishing House.

### List of Practical: OOP Using C++

- 1. Program to demonstrate encapsulation using of class.
- 2 Program to demonstrate use of array of objects
- 3 Program to demonstrate use of pointers
- 4 Program to demonstrate use of pointer to members of class
- 5 Program to demonstrate use of function overloading
- 6. Program to demonstrate inline function.
- 7 Program to demonstrate use of friend function
- 8. Program to demonstrate static data members & member functions of class.
- 9 Program to demonstrate use of different manipulations
- 10. Program to demonstrate objects as function arguments.
- 11. Program to demonstrate use of recursive function
- 12. Program to demonstrate use of constructor, constructor overloading & destructor
- 13. Program to demonstrate use of all types of Inheritance.
- 14. Program to demonstrate the virtual base class
- 15. Program to demonstrate the constructors in derived class.
- 16. Program to demonstrate use of unary & binary operator overloading
- 17. Program to demonstrate use of polymorphism (virtual function)
- 18. Program for reading and writing operations on text file.
- 19. Program for read, write, append & modify operations on binary file.
- 20. Program to demonstrate command linear gument.

#### First Semester MADVACS102: Advance Operating System

# Unit-I:

**Introduction:** A brief description of its functional behavior & responsibilities as a resource manager and as an interface between hardware and user. Logical View and User View, Operating system need and services, Classification and Evolution and organization of OS, Hierarchical/Layered Organization of OS.

**Processor Management:** Process concept, Process Control Block, Process operations, Scheduling algorithms. Short terms and long term process scheduling policies, Scheduling criteria, multiple processor scheduling, scheduling Algorithm, FCFS, SJF, Priority and round robin scheduling, critical section, semaphores. Asynchronous parallel process, multithreading at system/user level, Inter process communication, Process Synchronization & Deadlock, Monitors, Deadlock prevention & avoidance, Deadlock Detection and deadlock Recovery

### Unit-II:

**Memory Management:** Memory Management Techniques; Single partition allocation, multiple partition allocation, Swapping, paging and segmentation, segmented- paged memory management techniques; logical and physical address space; address mapping. Demand paging, Virtual memory, protection and address mapping hardware, page fault, Page replacement and page removal algorithms.

### Unit-III:

**Device Management and I/O Programming:** Classification of device according to speed, Disk structure, disk scheduling, FCFS scheduling SSTF scheduling, access method and storage capacity; sharable and non sharable devices and their management; spooling concept of virtual device, I/O Processor; CPU-IOP parallel operation, CPU-IOP Communication; Device drivers; I/O Pr

### Unit-IV:

**Information Management & File System:** Information-an important system resource, stored and maintained in files. File organization and access methods, logical and physical file structure; physical file system realized with device management function; file allocation methods, linked and index allocation, logical file implemented on physical file system. File protection and security, Directory structure, single level, two level, tree structure, Free Space Management, Allocation Methods, Efficiency & Performance, Recovery, FAT32, & NTFS.

### Unit-V:

**Distributed & Network Operating Systems:** Introduction to distributed systems, special functions supported by corresponding OS. Network OS; Remote login; remote file transfer. Distributed OS; Transparent migration of process & data; remote procedure call, Detection and recovery from failures. Distributed file system; mutual exclusion/synchronization using centralized and distributed approaches; concurrency control, majority protocols and time stamping; deadlock detection/prevention.

**Case Studies:** Single User System – MS-DOS, Multi User System – LIUNX/ Solaris 2.0, Network OS-Novell Netware.

#### **References:**

- 2. Andrew S. Tenenbaum : Modern Operating Systems; Prentice Hall, India
- 3. Dietel H.M.: An Introduction To Operating Systems; Addison Wesley, World Student Edition
- 4. Systems Programming & Operating Systems, 2 nd Edn., Tata Mc Graw Hill
- 6.. Operating System : Achyut Godbole
- 7. System Programming & OS : D.M. Dhamdhere
- 8. Operating System : Galvin

9. Michael Budnick L., Et Al., LAN Operating Systems; New Riders Publishing, Carmel, Indiana.

#### **Practical for Operating System:**

Following programs should be implemented in C++.

- 1. Program for FCFS scheduling
- 2. Program for SJF Scheduling
- 3. Program for Priority scheduling
- 4. Program for Round Robin scheduling.
- 5. Program for pager replacement algorithms
- 6. Study of Network and Distributed OS.
- 7. Case study of Linux/ Novell Netware/Windows NT etc.

(File handling Commands, Directory related commands, utility commands)

#### First Semester MEMBECS103: Embedded system

#### Unit I:

Microcontrollers and Embedded Processors, overview of the 8051 family, Inside the 8051, Introduction

to 8051 assembly programming, Assembling and running an 8051 program, the program counter and ROM space in the 8051, data types and directives, 8051 Flag bits and the PSW Register, 8051 Register

Banks and stack.

#### Unit II:

Loop and Jump instructions, call instructions, time delay generation and calculation, pin description of 8051, I/O programming, Bit Manipulation, Immediate and register addressing modes, accessing memory using various addressing modes, Unsigned Addition and SuCSraction, Unsigned Multiplication and division, signed number concepts and arithmetic operations.

#### Unit III:

Logic and compare instructions, rotate and swap instructions BCD and ASCII application programs, single-Bit Instruction programming, Single bit operations with CY, reading input pins vs. Port Latch,

programming 8051 Timers, counter programming, Basics of serial communication, 8051 connection to

RS232, 8051 Serial Communication programming

#### Unit IV:

Difference between RISC and CISC Architectures PIC Controller (Study Example Microchip: PIC 16F877) (i) Memory organization ii) I/O ports (iii) Indirect Addressing, INDF and FSR Registers

#### Unit V:

Introduction to ARM & Thumb Processor
ARM Controller (Study Example AT91M42800A)
(i) Architectural Overview. (ii) Memory Map. iii) Peripherals.
(iv) System Peripherals. v) User Peripherals. (vi) Operating Modes

#### **References:**

- 1. 8051 Microcontroller & Embedded systems By Muhammad Ali Mazidi
- 2. PIC16F87X Data Sheet
- 3. AT91M42800A Data Sheet
- 4. 8051 Microcontroller by Kenneth Ayala
- 5. ARM Architecture Reference Manual Edited By David Seal.
- 6. Microcontroller, theory and application Ajay Deshmukh.

#### List of experiments of Embedded System:

1. Simple assembly language program: Realization of Boolean expression using port.

2. Simple assembly language program: Running LEDs

3. Using Timer Couter for frequency measurement, by counting the number of pulses in fixed amount of time (e.g. 1 second)(Assembly Language Programm).

4. Using Timer/Counter for frequency measurement, by measuring the time period between two consecutive pulses (Assembly Language Program).

5. Write serial communication program in C. This program should:

b. Send a ASCII message to serial port (verify receipt of this message on a computer)

c. Then onwards, echo any character received (send characters from computer and verify receipt of echo).

6.. Study of minimum system based on ARM family micro-controller (e.g. LPC2104) and writing an Assembly Language Program for running LEDs.

7. Study of large system based on ARM family micro-controller, and writing C program to display a message on LCD.

#### First Semester MPADVACS104: Advanced DBMS

### UNIT-I

Overview of Database Concepts: Database and Need for DBMS,

Characteristics of DBMS, Database Users, 3-tier architecture,(its advantages over 2-tier) Data Models, Views of data-schemes and instances, Independence, Data modeling using the Entity-Relationship approach, Entities, Relationships, Representation of entities, attributes, relationship, attributes, relationship set Generalization, aggregation:

**Relational model:** Traditional database models, Relational Model, Structure of relational DB and different types of keys, Expressing M:N relation, relational algebra, Codd's rules, Constraints, Relational database languages, SQL and embedded SQL, Data definition in SQL, Views and queries in SQL, database design including conceptual and logical design technique, Specifying constraints and indexes in SQL, Specifying constraints management systems Oracle, Ingres etc.

#### UNIT-II

**Relational Database design:** Functional dependencies, and Normalization Normal forms based on primary keys (1 NF, 2 NF, 3 NF, BCNF, 4 NF, 5 NF) Loss less joins and dependency preserving decomposition

**Query Processing:** Query Processing Stages, Query Interpretation, Equivalence of Expressions, Query Resource Utilization, Query Execution Statistics, Query Execution Plan, Estimation of Query Processing Cost, Table Scan, Sample Index Access, Fill Factor, Multiple Index Access, Methods for Joining Tables (Nested Loop, Merge Join, Hybrid Join, Multiple Join) Structure of a Query Optimizer,

#### UNIT-III

**Transaction Processing & Concurrency Control:** Concept and definition of transaction, ACID properties, serializibility, Prioritization, states of transaction, Types of failure, desirable properties of transaction schedules and recoverability, serial usability of schedules, levels of transaction consistency, deadlocks, long duration transactions, transaction performance, transaction processing as implemented in contemporary database, management system. Concurrency Control, locking techniques, techniques based on time-stamp ordering, multiple granularity.

**Crash Recovery:** failure classification, recovery concepts, database backup, recovery concepts based on deferred update and on immediate update. Shadow paging, check points, on-line backup during database updates, crash recovery techniques.

#### UNIT-IV

**Distributed Database:** Homogeneous and Heterogeneous databases, Architecture and design of distributed databases, Distributed data storage, Data fragmentation with reasons, Degree of fragmentation, Correctness, rules of fragmentation, horizontal, vertical and hybrid fragmentation, Distributed query processing, recovery in distributed systems, commit protocols for distributed databases, multi-database system.

**Client/Server database:** Evolution of client concept, Client/Server environment, characterization of Client/Server computing. Functions of clients server, application partitioning, the two-layer and three-layer architectures, communication between clients and servers.

#### UNIT-V

Object Oriented Databases: Complex data types, Array & Multiset Types in SQL, Object

Identity & Reference types in SQL, Implementing Object Relational features, Persistent of Objects, Object Identity & Pointers, Object Relation Database, Object Oriented Vs. Object Relational.

**Integrity, Security:** Need for Database Integrity, Integrity Constraints, Non- Procedural and Procedural Integrity Constraints Specifications in SQL, Introduction to Database Security issues, Authorization and Use.

#### **References:**

- 1. Fundamental of Database Systems by R. Elmasri; S. Navate; Benjamin Cummings;
- 2. Introduction to database systems by C. J .Date
- 3. Database system concept by Korth
- 4. Principles of Database Management by James Martin
- 5. Relational database design for Micro computers Application by Prentice Hall (Jackson)
- 6. Database Management Systems by Bipin Desai

#### List of Practical : Advanced DBMS

- 1. Creating database tables and using data types.
- Create table, Modify table, Drop table
- 2. Practical Based on Data Manipulation.
- Adding data with Insert, Modify data with Update,
- Deleting records with Delete
- 3. Practical Based on Implementing the Constraints.
- NULL and NOT NULL, Primary Key and Foreign Key Constraint
- Unique, Check and Default Constraint
- 4. Practical for Retrieving Data Using following clauses.
- Simple select clause, Accessing specific data with Where, Ordered By, Distinct and Group By
- 5. Practical Based on Aggregate Functions.
- AVG, COUNT, MAX, MIN, SUM, CUBE
- 6. Practical Based on implementing all String functions.
- 7. Practical Based on implementing Date and Time Functions.
- 8. Practical Based on implementing use of union, intersection, set difference.
- 9. Implement Nested Queries & JOIN operation.
- 10. Practical Based on performing different operations on a view.
- 12. Practical Based on implementing use of triggers, cursors & procedures.
- 13. Make a Database connectivity with front end tools like VB, VC++, D2K.

### Second Semester MDATACS107: Data Structures Algorithms & Analysis Unit-I

Data structures basics, Mathematical/algorithmic notations & functions, Complexity of algorithms, String processing: storing strings, Linear arrays and their representation in memory, traversing linear arrays. Inserting & deleting operations, Multidimensional arrays, Record structures and their memory representation. Stacks and their array representation. Arithmetic expressions: Polish notation, Recursion. Tower of Hanoi problem.

### Unit II

Queues. Representation of queue, Insert & delete operations on queue, Deques, Priority queues. Linked lists and their representation in memory, traversing a linked list, searching a linked list. Memory allocation, Insertion deletion operations on linked lists. Header linked lists, Two-way linked lists. Circular linked list

### Unit-III

Trees, Binary trees & and their representation in memory, Traversing binar y trees. Traversal algorithms, Header nodes: threads. Binary search trees, searching, inserting and deleting in binary trees. Heap and heapsort. Path length & Huffman's' algorithm. General trees.

### **Unit-IV**

Graph theory, sequential representation of graphs, Linked representation, operations & traversing the graphs. graphs and its variants, breadth first search, depth first search. Greedy method, single source shortest path, minimum spanning trees, Prims' algorithm.

### Unit-V

Sorting, Time and Space Complexity of sorting, Insertion Sort, Selection Sort. Merging & Mergesort, Radix sort, Hashing. Divide and conquer, binary search with its variants, Quick sort, Linear search and Binary search algorithms.

- 6. E Horowitz and S. Sahani, Fundamentals of Computer Algorithm, Galgotia Publications, 1991.
- 7. Aho, Hopcroft and Ullman, The Design and Analysis of Algorithms, Addision- Wesley Publication, 2000
- 8. Simon Harison, James ross, Algorithms, Wiley India, 2006

Implementation using C/C++/Java

- 1. Write an application to implement Tower of Hanoi Problem Algorithm.
- 2. Write an application to implement Abstract data type stack
- 3. Write an program to evaluate Post fix expression using stack
- 4. Write a program to implement Abstract data type queue.
- 5. Write a program to implement singly linked list that performs various operation such as
- insertion, deletion, searching a node in linear linked list.
- 6. Write a program to implement Preorder Traversal of a binary tree.
- 7. Write a Program to search a given element using Binary Search.
- 8. Write a Program to implement Selection Sort.
- 9. Write a Program to implement Merge Sort.
- 10. Write a Program to Perform insertion or search in a specified level of a stack
- implemented tree- structured symbol table.
- 11. Write a program to find minimum and maximum form a given array.

#### **Software Testing:**

At least 10 practical should be conducted on any s/w testing tool.

#### Second Semester MSOFTCS108: Software Engineering and Testing

# Unit-I:

**S/w Engineering Fundamentals:** Definition of Software, The birth of s/w engineering, s/w Product:, Software development paradigms, software Characteristics and Application. Software Development life cycle, water fall model, Prototyping, Incremental & Spiral model, 4th Generation Techniques.

**Project Management:** Concepts, Software Process and Project Metrics; Software Measurements; Software Projects Planning: Objectives, Scope and Resources. Software Project Estimating, Decomposition Techniques. Empirical Estimation Models: COCOMO Model, Software Equation. Project Scheduling and Tracking.

#### Unit-II:

**Software Requirements and Analysis:** System Engineering, Product Engineering: Characteristics of a Good SRS, Requirement analysis, Principal, Software prototyping,, Specification and its review. Analysis modeling: data modeling, mechanics for structured analysis, system analysis tools and techniques, DFD, ER- Diagrams. Data Dictionary (DD),

**System Design:** Design concept and principles and its elements, effective modular design, Cohesion & Coupling, Feature of modern graphics interface (GUI). Design Methods: data design, interface design guidelines, procedural design.

#### Unit-III:

**Software Quality Assurance:** Definition of Quality and factors, QA, SQA, Software Quality Metrics, Process and Product Quality, The SEI Process Capability Maturity Model (CMM), ISO ,Six-Sigma. Software Quality Assurance, Need for SQA, SQA Activities, Building blocks of SQA, SQA Planning & Standards, Software Reliability, Reliability Measures.

**Introduction to Software Testing:** Need of s/w testing, Error, fault and failure. s/w Testing fundamentals, Testing objectives, test information flows, Testing lifecycle, Test Cases – Test case designing (Concept & introduction should be covered here)

#### Unit-IV:

**Levels of Testing** Unit Testing, Integration Testing, System Testing, Acceptance Testing, Alpha testing & Beta testing, Static vs. Dynamic testing, Manual vs. Automatic testing, Testers workbench, 11 steps of testing process (Only steps should be covered)

**Different types of Testing:** Installation Testing, Usability testing, Regression testing, Performance testing, Load testing, stress testing, Security testing, Static & Dynamic testing, Static testing techniques, Review types : Informal Review, Technical or peer review, Walkthrough, Inspection, static analysis, Review meeting and reporting, Review guidelines & Review checklist, Data flow analysis,Control flow analysis, Cyclometric Analysis, Dynamic testing – need & Advantages

### Unit-V:

**Black Box & White Box Testing (Test Case Design Techniques):** Functional Testing (Black Box), Equivalence partitioning, BVA, Decision table based testing, Cause-Effect graphing, Syntax testing (Concept & Test case generation only), Structural Testing (White Box), Coverage

testing, Statement coverage, Branch & decision coverage, Path coverage, Validation testing Activities, Low level testing, High level testing, Black box Vs. White Box

**Object Oriented Testing:** Issues in OO testing, class testing, GUI testing, Object Oriented Integration & system testing.

**Computer Aided Software testing tools (CAST):** Static Testing Tools, Dynamic Testing Tools, Characteristics of Modern Tools. e.g. WinRunner, LoadRunner, Rational ROBO.

12. Boris Beizer, "Software System Testing and Quality Assurance", Van Nostrand Reinhold, New York, 1984.

13. Glenford Myers, "The Art of Software Testing", John Wiley & Sons Inc., New York.

#### Second Semester MADVACS109: Advance Computer Networks

### Unit-I:

**Introduction:** Layered network architecture, review of ISO-OSI Model. Data communication techniques: Pulse Code Modulation, (PCM), Data modems, Multiplexing techniques-Frequency-Division, Time-Division Transmission Media – Wires, Cables, Radio, Links, Satellite Links, Fiber-Optic Links.

**Asynchronous Transfer Mode (ATM):** Cells, Header and Cell Formats, Layers in ATM, Class 1,2,3,4 Traffic Random Access Data Networks, Concept of Random Access, Pure ALOHA: Throughput Characteristics Slotted ALOHA, throughputs for Finite and Infinite, Population SALOHAS. MARKOV Chain Model for S-ALOHA .

### **Unit-II:**

Local Area Networks (LANs): IEEE 802.4 and 802.5 Protocols, Performance of Ethernet and Token

ring protocols, FDDI Protocol, Distributed Queue Dual Bus (DQDB) protocol.

**Network Layer Protocols:** Design issues: Virtual Circuits and Datagrams. **Routing Algorithms:** Optimality Principle, Shortest Path Routing-Dijkstra, Bellman-Ford and Floyd-Warshall Algorithm.

# Unit-III:

**Data Link Protocols:** Stop and Wait Protocols: Noise Free and Noisy Channels Performance and Efficiency, Verification of Protocols using Finite State Machine. HDLC Data Link Protocol. Integrated Services Digital Network: Interfaces, Devices, Channel Structure. Dead Locks and their avoidance, Network Layer in ATM, Internetworking: Bridges, Routers and Gateways, Internet Architecture and Addressing.

**Transport Layer Protocols:** Design issues: Quality of Services, Primitives Connection Management: Addressing, Connection Establishment and Releases, Use of Timers, Flow Control and Buffering, Multiplexing, Crash Recovery. Elements of TCP/IP Protocol: User Datagram Protocol Connection Management, Finite State Machine.

**Session Layer Protocols:** Dialog Management, Synchronization, OSI Session Primitives Connection Establishment.

### Unit-IV:

Error Detection: Parity Check Codes, Cyclic Redundancy Codes.

**Queuing Models:** Data Traffic Characteristics: Poisson Process Birth-Death Process: Markov Chain Models M/M/1 Queues: Delay and Little's Formula M/M/S/K Queues: Average Queue Length, Delay and Waiting Time Blocking Probability. M/G/1 Queues, Imbedded Markov Chains, Poolaczek-Kinchin Transform Formula, Delay Formula Using Residual Service Time.

# Unit-V:

**Presentation and Application Layer Protocols**: Presentation Concepts NMP- Abstract SyntaxNotation-1 (ASN-1), Structure of Management, Management Information Base. **Cryptography:** Substitution Transposition Ciphers, Data Encryption Standards (DES) Chaining, Breaking DAS, Public Key Cryptography and Authentication Protocols, Electronic Mail, World Wide Web.

6. W.Stalling: Data And Computer Communication, Maxwell-, Macmillan, International Edition.

# Practical

At least 10 practical should be conducted on above paper.

Numerical Methods & Discrete Mathematical Structures

At least 10 practical should be conducted on various algorithms of numerical methods..

#### Second Semester MNUMECS110: Numerical Methods & Discrete Mathematical Structures

### Unit-I:

**Transcendental and polynomial equations.** The roots of an equations; definitions and examples, intermediate value theorem and bisection method. The Regular-falsi method and examples, the secant method and examples, The Newton- Raphson Method and examples, choice of an iterative method and implementation.

**System of linear algebraic equations:** elements of matrix theory; algebra of matrices ,(basic operations) rank of a matrix and existence results for system of linear algebraic equation. Cramers role. The gauss elimination method for providing L-U decomposition of tranquilization method. The gauss –seidel iterative method, choice of the method and implementation.

### **Unit-II:**

**Numerical differentiation and integration:** numerical differentiation: methods based on finite differences. Numerical Integration: The trapezoidal rule, the simpson's rule and gauss-lengendre integration method.

**Numerical Solution of ordinary:** differential equations. Ordinary differential equations of the first order basic concepts & various analytic methods (separable equation, equation educable to separable form, exact differential equation, integrating factors, linear first order differential equation). Reduction of higher order differential equations to the system of first order differential equations initial and boundary value problems: definitions and examples, Euler's method for solving the initial value problems, Rung-Kutta methods for the system of first order differential equations.

# Unit-III:

**Interpolation and approximation:** Interpolation with equal intervals: finite difference tables, The Gregory Newton formula for forward & backward interpolation. Interpolation with unequal intervals: Newton's divided difference interpolation formula, language interpolation, the least square approximation

# **Unit-IV:**

**Desecrate structure:** fundamentals set subsets and operations on sets; semi groups finite and infinite set, relation and properties of relations, equivalence relations.

**Boolean Algebra, Posets and lattices:** partial order relation, Poset, Lub, Gid, maximal and minimal elements of a posets. Def and examples of boolean algebra, lattices, distributive laws in lattices, complemented lattice's prepositional calculus, boolean functions, min and max, terms, simplification of boolean function with Karnaugh Map & Quine MC Cucky method.

**Introduction to Combinatorices:** Basic Thermo sonpermutations and combination, ordinary exponential generating functions recurrence equations.

### Unit-V:

**Graph And Algorithms:** Basics definition of graphs, connectivity of graph, cut points, cycles, hamiltonian graph, different characterization of trees, bipartite graphs, algorithms on graphs, Breadth First Search and Depth First Search ,Dijkstra Algorithm for Shortest Path algorithms, Floyd's Algorithm for all Pairs of Shortest Paths, Kruskal's And Prim's Algorithm for Minimum Spanning Tree.

**FiniteState Machines and Languages:** finite state machines, semigroups,machine languages and regular languages , simplification of machines.

#### Third Semester MPROGCS201: Programming in Java

# UNIT-I

Introduction: History and features of Java, Difference between C, C++ & JAVA. JAVA and Internet, WWW, Web Browsers, java supports system, Java Environment. JDK, JVM, Byte code
Java Programming Basics: Structure of Java program, JAVA tokens and Statements, Constants & Variables, Data types, Operators, Command line arguments.
Java Statements & Arrays: if and switch statement. while, do-while and , for. Introduction to arrays, types of arrays, new operator, Strings. String class & its methods, Vectors.
Classes & Objects: Specifying classes, Methods and fields, creating objects. Passing objects to methods, returning objects, static fields & methods. Constructors, Garbage collection, Overloading methods & constructors this keyword

# Unit-II:

**Inheritances:** Specifying sub class, types of inheritance, visibility control: public, private, protected, package. super keyword, Overriding methods, Dynamic method dispatch, Abstract methods and classes, final methods & classes,

**Packages & Interfaces :** Introduction to packages, naming conventions, package statement, creating packages, import statement, accessing package, use of CLASSPATH, adding class to package, hiding classes. Interface, implementing interfaces, multiple interfaces.

**Multithreading:** Creation threads, Extending Thread class, implements Runnable interface, stopping and blocking thread, Thread life cycle, thread priorities & Thread synchronization, using Thread methods.

# Unit-III:

**Exception Handling**: Managing errors, types of errors, exceptions, syntax of exception handling code. try, catch, throw, throws and finally statements, multiple catch & nested try statements.

**Java Input Output:** Java I/O package, Byte/Character Stream, Buffered reader / writer, File reader / writer, File Sequential / Random. Reading numeric, character & strings data from keyboard.

**Applet programming**: Applet Vs. Application, Creating applets, life cycle, local & remote applets. <APPLET> tag & its attributes, adding applet to HTML file, Running applet.

# Unit-IV:

**Abstract Windows Toolkit (AWT):** Components and Graphics, Containers, Frames and Panels, Layout Managers, Border layout, Flow layout, Grid layout, Card layout, AWT components. Event delegation Model, Event source and handler, Event categories, Listeners, Interfaces, Controls such as text box, radio buttons, checkboxes, lists, choice, command buttons, text area etc.

**JDBC:** Java database connectivity, Types of JDBC drivers, Writing JDBC applications, Types of statement objects( Statement, PreparedStatement and CallableStatement), Types of resultset, Inserting and updating , records, JDBC and AWT,

# Unit-V:

Networking with Java : Networking basics, Sockets, port., Internet addressing, java.net -

networking classes and interfaces, Implementing TCP/IP based Server and Client **Servlets:** Introduction Servlet API Overview, Writing and running Simple Servlet, Servlet Life cycle, Generic Servlet, HTTPServlet, ServletConfig, ServletContest, Writing Servlet to handle Get and Post methods.

- 2. Herbert Schildt, The Complete Reference, seventh edition, [TMH]
- 3. Programming with JAVA A Primer by E. Balguruswamy (TMH)
- 4. Steven Holzner, JAVA 2 Programming Black Book, Wiley India.
- 5. Ivor Horton, Beginning Java 2, JDK 5 Ed, Wiley India.
- 6. Java 2 from scratch by Steven Haines the PHI
- 7. Java database Programming Maithew Siple THM
- 8. Instant Java John A. Few, Stephen G. Rew (Sun Microsystems)
- 9. Experiments in JAVA S.A. Relsel Shy AWL.

#### List of Practical: Programming in Java

- 1. Program that demonstrate use of Arrays.
- 2. Program to demonstrate constructors.
- 3. Program to demonstrate method overloading.
- 4. Program that demonstrate static fields and static methods of class.
- 5. Program that demonstrate inheritance and its types
- 6. Program to demonstrate use of method overriding.
- . 7. Program to demonstrate the use of abstract method and abstract class.
- 8. Program that demonstrate String operations (String class methods)
- 9. Program that demonstrate package creation and use in program.
- 10. Program to demonstrate interface.
- 11. Program to handle exceptions in program (system generated & user defined exceptions)
- 12. Program that demonstrate multithreading. (Creating thread using Thread class and

implementing Runnable interface)

- 13. Program for Thread synchronization.
- 14. Program using Byte Stream & Character Stream classes.
- 15. Program for reading input from keyboard.
- 16. Program that demonstrate Applet programming.
- 17. Program that demonstrate 2D shapes on frames.
- 18. Write a program that demonstrate use of various controls and Layouts
- 19. Program that demonstrate text and fonts.
- 20. Program that demonstrate event handling for various types of events.
- 21. Program to demonstrate JDBC (Inserting, displaying & updating records)
- 22. Program to demonstrate socket programming. (Client & Server)
- 23. Program to demonstrate Servlets.

#### Third Semester MOBJECS202: Object Oriented Analysis and Design using UML

# Unit-I:

#### Introduction:

Two views of software Developments: SSAD and OOAD, Why Object – Orientation? Object and classes, Abstraction and encapsulation, Methods and Message, Interfaces, Inheritance and Polymorphism, Access Control, The Business case for OO Developments.

#### **Object Oriented Methodologies:**

Object Oriented Design –Booch, Object Modeling Techniques- Rumbaugh, Object – Oriented Analysis – Coad- Yourdan, Object – Oriented Software Engineering – Ivar Jacbson,

# Unit-II:

Unified Approach: Diagramming and Notational Techniques using the UML, UML Notation, {Analysis Diagramming Techniques.} == Introduction to all (ten) Diagram, {Design Diagramming Techniques}, Generalization Specialization. Aggregation and composition, Association, Cardinality, Navigability, Icons relationships and adornments.

#### **Object-Oriented Systems Development Process:**

Rational Unified Process, Four Major phases: Inception Elaboration, Construction, Transition, Requirements Engineering: Problem analysis, Understanding Stockholders need, Type of requirements,

Use-case Model : Writing Requirements

# Unit-III:

#### Analysis:

Behavioral Analysis, Domain Analysis or Business Object Analysis, Use-case Driven Object Oriented analysis : The UML approach., Develop use-case Model, Use- case Description, Documentation, Activity

Diagram, Identify the classes., Introduction to different approaches for identifying classes, "Noun Phrase" approach OR, "Conman Class Pattern" approach Or, "CRC" approach Or, Usecase Driven Approach. Containment and Composition, Aggregation, Inheritance, SuCSypes and IS-A Hierarchies, Association and Link Relationships. Diagramming System Events.

### Unit IV:

#### **Design Phases:**

Translating Analysis Concept into Design, Optimizing classes and Objects: The Multi-tiered Architecture View, ,Mapping System functions to objects., Object to Object Visibility, Collaboration Diagram, Sequential Diagram, Specification Class Diagram, Specifying Object Interfaces, Designing the Data Access layer, Design User Interface layer, Designing System Interfaces, Controls and Security..

### Unit V:

#### **Design Refinement**

Designing for Extensibility, Design for reusability, Portioning class space, Checking Completeness and correctness.

#### Persistent Object and Database Issues:

The Cood Data Management Domain, Object Persistence, Object-oriented Database Management System, Object- Oriented verses Relational Database, Mapping object to Relational Data structure. **Testing:** Introduction to Testing Strategies, Impact of Object Orientation on Testing. Testing Business Process, Design Matrix, Discovering reusable pattern.

- 14. UML Instant Thomas A Pendar Wiley Publication

15. UML in Nutshel

### Practical

OOAD: At least 10 practical should be conducted on OOAD

#### Third Semester MCOMPCS203: COMPUTER GRAPHICS

# Unit-I:

Introduction of computer Graphics and its applications, Overview of Graphics systems, Video display devices, Raster scan display, Raster scan systems, video controller, Raster scan display processor, Random scan display, random scan systems, color CRT monitor, Flat panel display, Interactive input devices, Logical classification of input devices, Keyboard, mouse, Trackball and spaceball, Joysticks, Image scanner, Light pens, Graphics software, Coordinates representations, Graphics functions.

# Unit-II:

Line drawing algorithms, DDA, Bresenham's, Circle generating, Mid-point circle algorithm, Ellipse generating, Polynomials, Scan-line polygon fill, Boundary fill.

# Unit-III:

Basic transformation's, Translation, Rotation, Scaling, Matrix representation's & homogeneous coordinates, Composite transformation's, Reflection, Two dimensional viewing, Two dimensional clipping, Line, Polygon, Curve, Text. 3D-transformation, Projection, Viewing, Clipping,.

### **Unit-IV**

Spline representation, Cubic spline, Bezier curve, Bezier surfaces, Beta spline, B- spline surfaces, B- spline curve, Hidden surfaces, Hidden lines, Z-buffer.

### Unit-V

Fractal's geometry Fractal generation procedure, Classification of Fractal, Fractal dimension, Fractal construction methods. Color models, XYZ, RGB, YIQ, CMY & HSV, Shading algorithms, Shading model, Illumination model, Gouraud shading, Phong shading.

### **REFRENCES:-**

1. Computer Graphics by M. Pauline Baker, Donald Hearn 2nd Edition PHI

2. Mathematical Element for Computer Graphics By. David F. Roger., J. Alan Adams, 2nd Edition Tata Mc GHill

- 3. Principles of Interactive Computer Graphics By. William. M. Newmann 2nd Edition Mc. GraHill
- 4. Procedural Element for Computer Graphics By. David F. Roger. Mc. Graw Hill.
- 5. Computer Graphics By A.P. Godse 2nd Edition TPPublication,
- 6. Computer Graphics By V.K. Pachghare, 2nd Edition Laxmi Publication
- 7. Multimedia by Gokul

#### Third Semester MDIGICS204: DIGITAL IMAGE PROCESSING)

#### Unit-I:

Introduction to image processing, Two Dimensional Systems and Mathematical Preliminaries.

#### Unit-II:

Image Perception, Image Sampling and Quantization, Image Transforms, Image Representation by Stochastic Models.

#### **Unit-III:**

Image Enhancement, Image Filtering and Restoration.

#### Unit-IV

Image Analysis and Computer Vision.

#### Unit-V:

Image Reconstruction from Projections, Image Data Compression.

#### **Reference:**

- 1. Fundamentals of Digital Image Processing, A. K. Jain, Prentice Hall,
- 2. Digital Image Processing, 3rd Ed. Rafael C. Gonzalez, Richard E. Woods, Prentice Hall,

#### Fourth Semester MARTICS207: Artificial Intelligence (A.I.)

### Unit-I:

**Introduction:** Games, theorem proving, natural language, processing, vision & speech processing, robotics, and expert systems AI, Techniques – search, knowledge, abstraction problems solving State Space Search,

**Control Strategies:** Depth First Search, Breadth First Search, and Production Systems. **Problem Characteristics:** Decomposition, Ignoble, Recoverable, Predictable.

### Unit-II:

**Use of Heuristics:** Hill climbing. Best First Search A\* Algorithm : Admissibility, AND/OR Graph- AO\* Constraint Satisfaction : Cryptoairthmetic, Waltz Line Labeling.

**Game Playing:** Miming Search, Alpha-Beta Pruning. **Knowledge Representation:** Predicate Logic, Well Formed Formulas, Quantifiers; Prenex Normal Form, Solemnization; unification, modus ponies; resolution refashion-various strategies.

### Unit-III:

**Rule Based Systems:** Forward Reasoning: conflict resolution , backward reasoning: use of no backtrack structured knowledge representations : semantic net : slots inheritance frames-exceptions and

defaults -attached predicates, conceptual dependency formalism.

Object Oriented Representations: Al Programming Languages: PROLOG,

Syntax, Procedural and declarative meanings, prologue unification mechanism, anonymous variable, lists;

use of fail, CUT, Not.

**LISP:** Basic Concepts, eval functions, functions and variables, scooping of LISP variables, iteration and recursion.

### Unit-IV:

Handling Uncertanity: Probablistic Reasoning , Bays Net , Dempster Shaver Theory, use of Certainty

Factors, Fuzzy Logic Nonmonotonic Reasoning, Dependency Directed Backtracking, Truth, Maintenance

Systems.

**Learning:** Concept of Learning, Learning Automation; The Genetic Algorithm, Learning by Induction,

Neural Networks, Hopfield Networks, Perceptions-Learning Algorithm, Backpropagation Network Boatsman Machine, Recurrent Networks. Planning:Components of Planning System, Plan Generation Algorithms, Forward State Propagation, Backward State Propagation, Non-Linear Planning Using Constraint Posting.,

### Unit-V:

**Expert Systems:** Need & Justification for Expert Systems- Cognitive Problems, Expert System Architecture, Rule Based Systems, Non Production System, Knowledge Acquisition, Case Studies: Mycin, R1.

**Natural Language Processing:** Syntactic Analysis, Top Down and Bottom Up Parsing; Augmented Transition Networks, Semantic Analysis, Case Grammars.

- 9. Prolog From The Beginning H.Konigslerg & F.De .Bruyn, MC-Graw Hill Ed.

#### Fourth Semester MINTECS208: Internet Computing with ASP.NET

### Unit-I:

**HTML Basics:** Introduction to Internet, Applications, Web designing, web browser, web pages, home page, web site, web servers, www. Concepts of hypertext, hypermedia, versions of HTML, elements of HTML, syntax, sections of HTML, building & executing html documents, Various tags of HTML:

Headings & Title, Text-level elements, Changing Colors font, size using FONT> Tag, Text alignment & paragraph Creating links with <A Href> tag, Inserting image using <IMG> tag, Creating Table with <TABLE> tag, rowspan, colspan attributes. <FRAMESET> & <FRAME> tag, <FORM> tag, creating text boxes, buttons, checkboxes, radio buttons, hidden control, password, lists & dropdown list, textarea. Submitting a form, get & post method. ASP & HTML forms. Working with Cascading Style Sheet (CSS):

#### Unit-II:

**ASP.NET Controls:** Overview of dynamic web page, introduction & features of ASP.NET, understanding ASP.NET controls, applications, web servers, installation of IIS. Web fors, web form controls, server controls, client controls, adding controls to web form, buttons, text box, labels, checkbox, radio buttons, list box. Adding controls a runtime, Running a web application, creating a multiform web project, Form validation: client side and server side validation, Validation controls: required field comparison range, Calendar control, Ad rotator control, Internet Explorer control.

#### **Unit-III:**

**ADO.NET:** Overview of ADO.NET, from ADO to ADO.NET, ADO.NET architecture, Accessing data using data adapters and datasets, using command and data reader, binding data to data bind controls, displaying data in data grid.

#### **Unit-IV:**

**XML in .NET**: XML basics, attributes, fundamentals of XML classes: Document, text writer, text reader, XML validations, XML in ADO.NET, Data document

#### Unit-V:

**Web Services:** Introduction, State management, view state, session state, application state, service description language, building & consuming a web service. Web application development, Caching, Threading concepts, Creating threads in .NET, Managing threads, Thread Synchronization, features of .NET, role based security & code access security, permissions
